

AWOLESI VICTOR

Frontend Developer | Full-Stack Software Engineer

Lagos, Nigeria | awolesivictor7@gmail.com | (+234) 814 595 8722 | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Frontend-focused software engineer with 3+ years shipping production web apps, expanding into full-stack development. Co-founder and Frontend Lead at Senviok, owning the product's UI, design direction and QA end to end. Independently built and delivered 15+ projects — including Quix AI, a full AI-powered study platform built solo — across React, TypeScript, Node.js and Supabase.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3, SQL

Frontend: React, Tailwind CSS, Framer Motion, UI/UX Design

Backend & Data: Node.js, Express, MongoDB, Supabase (Postgres, Auth, Realtime)

Integrations & Tools: REST APIs, Google AI API, Paystack, Netlify, Vercel, Git/GitHub

Practices: SEO Optimization, Performance Optimization, QA Testing

PROFESSIONAL EXPERIENCE

Co-Founder & Frontend Lead — Senviok

2026 – Present

Developer-first messaging infrastructure (email, SMS, WhatsApp, OTP delivery via a single API) · senviok.live

- Own the end-to-end frontend architecture and implementation for the product, translating API-first requirements into a clean, developer-facing dashboard and UI.
- Set the product's design direction from the ground up, establishing the visual and UX language used across the platform.
- Lead quality testing across releases, catching issues before they reach users of the messaging API.
- Work directly with the founding team to prioritize and ship features across the platform's email, SMS and WhatsApp channels.

Independent Full-Stack Developer — Freelance & Personal Projects

Dec 2023 – Present

Self-directed and client engagements

- Independently designed, built and shipped 15+ web projects — including e-commerce platforms, an AI study tool, agency and institutional websites, and internal tools — progressively taking on more backend responsibility alongside frontend work.
- Delivered end-to-end client projects (design through deployment) across e-commerce, real estate, education and beauty/branding, managing scope and client communication directly while growing from pixel-level UI work into REST API design, authentication and database-backed features.
- Built a full e-commerce checkout flow with Paystack payment integration and Supabase-backed real-time inventory for a retail client; per the client, it replaced manual WhatsApp-based ordering and contributed to a post-launch revenue increase.

SELECTED PROJECTS

Quix AI — AI-Powered Study Companion (solo-built)

2025

- Designed and built QuixAI end to end, solo — an all-in-one AI study companion, from UI through backend and AI integration.
- Built an AI tutor that generates live diagrams and explanations in chat, plus math problem-solving via OCR, using the Google AI API and other integrated APIs.
- Implemented quiz, study-note and flashcard generation from uploaded PDFs, spaced-repetition scheduling, and integrated web search for extended context.
- **Stack:** React, TypeScript, Tailwind CSS, Supabase, Google AI API · Live: quix-ai-buddy.vercel.app

Soft Store NG — E-Commerce Platform (freelance)

2025

- Developed a full-stack e-commerce store for the gaming/tech community, integrating Paystack for payments and Supabase for real-time inventory tracking, plus an admin dashboard for order management.
- **Stack:** React, Tailwind CSS, Supabase, Paystack · Live: soft-store-ng.vercel.app

Ephraim College & AETHERIA Estate — Client Websites

2025

- Delivered a marketing site for an international school and a lead-focused property showcase for a real estate client, each with animated, responsive layouts built in React, Tailwind CSS and Framer Motion. **Live:** ephraim-school.vercel.app
